

In 1936, the significant scientist and climatologist, **Wladimir Köppen**, was the first person to create a system to identify major climate types of the world.

Equatorial

Tropical
warm and wet
Tropic of Cancer
Equator
Tropic of Capricorn

Arid

Deserts
hottest and driest regions with little or no rainfall

Mediterranean

Hot dry summer
winter is cooler with some rainfall, but hardly any frost

Snow

Long cold winter
summer is short with rapid changes in the spring & autumn

Polar

Very, very cold
cold as
-60 °C in Arctic
-80 °C Antarctic

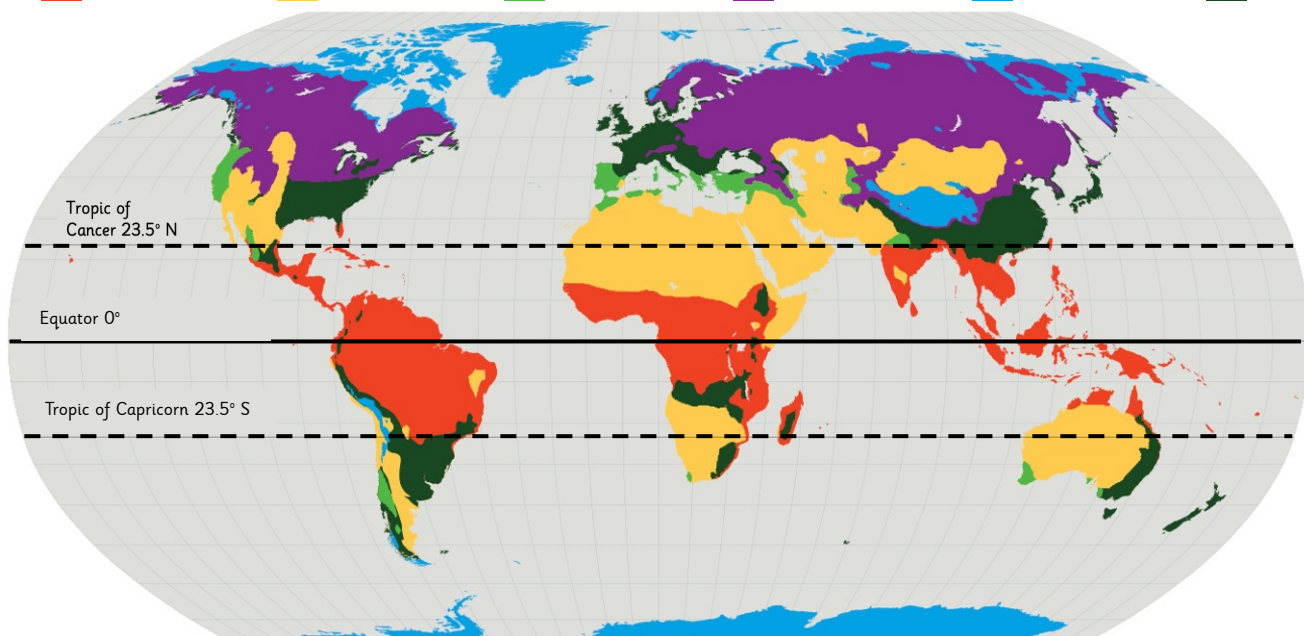

Temperate

Warm or hot summer
slightly colder winters

Environment region map of the world
